INDEX

1, Unpacking Machine	. 1
2. Setting-up Machine	. 1
3. Handwheel Rotation and Speed	.1
4. Oiling and Maintenance	.1
5. Replacing Needle	.2
6. Threading Machine	.3
7. Inserting the Work and Starting to sew	4
8. Adjustment of Needle Penetration	4
9. Stitch Length Regulation	
10. Needle Recommendation	5
11. Skip Stitch Device	6
12. Removal of the Work from the Machine	6
13. Cloth Retainer Spring Adjustment(for H-101-H)	7
14 Stitch Stabilizing Guide (for H-1012)	7

1. Unpacking Machine

Open packing box by carefully removing its cover so as not to damage the machine or those of its parts which project from the top, such as the tension parts.

Small accessory parts are packed separately in individual packages. Do not discard any packing materials without prior scrutiny as to contents.

Clean from machine all greases, dirt or dust. Pay particular attention to area around the looper me chanism and looper.

2. Setting-up Machine

Assemble knee lifter lever to machine and place on sewing table so that lever is 13m/m distant from front edge of the table. Line up belt groove in belt pulley of handwheel with belt groove of drive mechanism (motor or clutch).

Mark three screw hokes for fastening machine to sewing table and place felt pad under machine bed before machine is tightened down.

3. Handwheel Rotation and Speed

Turn handwheel only in direction away from operator for clockwise rotation. Be sure motor drive is wired up to obtain the same clockwise rotation. The recommended operating speed of a brand new machine is 1,800 to 2,000 stitches per minute. After a breaking-in period of several weeks and after the operator has become skilled in the operation of the machine, the speed can be increased up to 2,500 stitches per minute.

4. Oilling and Maintenance

It is important not to operate the machine before oil of good quality has been filled in each and every oil hole along the top of the machine. When breaking-in a new machine oiling should be done sparingly several times a day. Thereafter, one oiling daily will be sufficient. After oiling, wipe machine carefully to avoid soiling of the material.

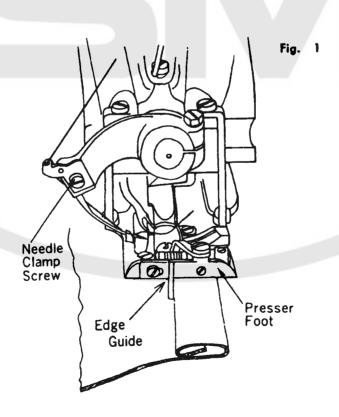

Do not operate without material under the presser foot unless the knee lever is depressed. This will prevent damage to the needle and the feed dog as well as the feed plattens.

5. Replacing Needle

Turn handwheel away from operator (clockwise) until needle reaches the end of its return stroke (extreme left hand position). Adjust penetration dial to least amount of penetration (turn clockwise towards 1).

Remove old or defective needle by loosening needle clamp screw. Insert new needle into seat in needle clamp as far as it will go. Tighten needle clamp screw.

Turn handwheel slowly away from operator and observe movement of needle. The curved portion of the needle should bear slightly on the needle guide groove in the left hand part of the presser foot.

7. Inserting the Work and Starting to Sew

Depress knee lifter. This causes the feed plate to swing downward and creates a gap between the presser foot and the feed plate.

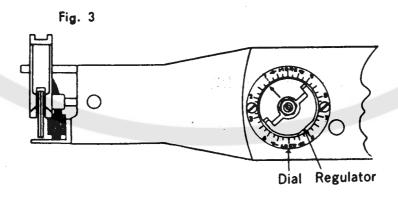

Insert the work in the gap just opened in such a manner that the folded or sewn edge of the material is alongside the edge guide of the presser foot. (see Fig. 1)

When the material is in proper position, completely release the knee lifter. Get the machine started slowly and watch the material pass edge guide rather than to observe the action of the needle.

8. Adjustment of Needle Penetration

The type of material to be blindstitched governs the degree of needle penetration which is required. It is, therefore, recommended to stitch a few centimeters as a test and make adjustments for penetration depending on the appearance of the trial stitching.

Turn regulator clockwise for less penetration and counter-clockwise for more penetration. (Fig. 3)

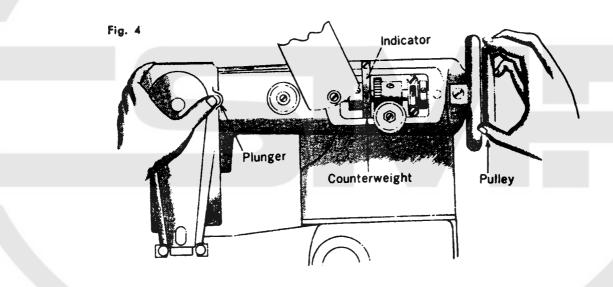

9. Stitch Length Regulation

Stitch length adjustment can be easily effected by adjusting needle driving eccentric in arm.

Go about it as follows:

Turn handwheel by hand pushing plunger until same is felt to drop into a recess within the mechanism inside the arm of the machine.

With the plunger remaining depressed into this recess continue turning the handwheel either forward or in reverse until the desired number of stitches per inch is visible on indivator. (see Fig. 4)

10. Needle Recommendation

The recommended needle is system LW x 6T.

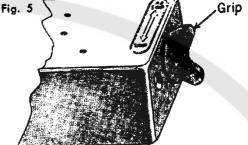

Size	Material
(11)	Cottons. Silks. Acetates, Orlon, Dacron and similar type of light weight fabrics.
31/2 (14)	Medium weight materials. Woolens and Others.
4 (16)	Thick materials for coats, house furnishings.

11. Skip Stitch Device

The position of grip at the right side of the machine controls the skip stitch device. (see Fig. 5)

When this grip points towards NO SKIP, the needle catches the material at each stitch. Pointing towards SKIP, the needle penetrates the material at every other stitch.

Be sure that grip is pushed completely in either direction and needle peneration readj usted every time operation is changed from skip to nonskip.

12. Removal of the Work from the Machine

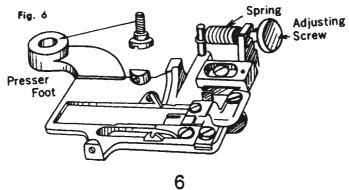

Stop machine and turn handwheel away from operator until needle is completely out of the material. Press the knee lifter to the right and pull the work-piece rearward out of the machine with a quick stroke. This will lock the last stitch and break the thread.

13. Cloth Retainer Spring Adjustment (for H-101-H)

The tension of cloth retainer spring can be adjusted by turning the cloth retainer spring adjusting screw (see Fig. 6)

To increase the tension of cloth retainer spring, turn this screw to the right (clockwise). It is suitable for thicker material.

To decrease the tension, turn this screw to the left (counter-clockwise). It is suitable for thinner material.

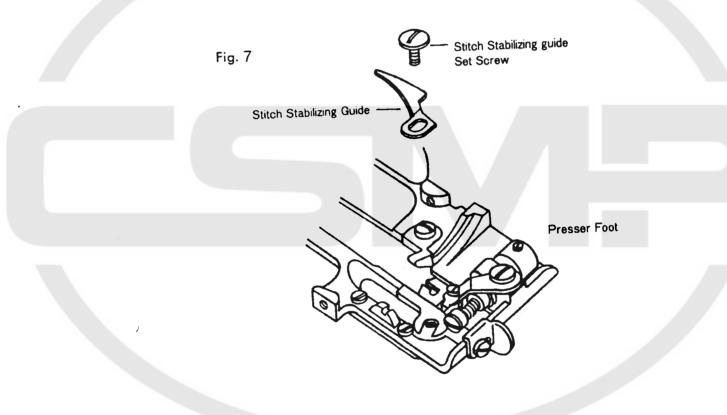

14. Stitch Stabilizing Guide (for H-10l2)

Stitch Stabilizing Guide is effective for soft and uniform stitch on extremely thin material.

If required tight stitch on thin and medium materials, loosen Stitch Stabilizing Guide Set Screw to take off Stitch Stabilizing Guide.

Be sure to tighten Stitch Stabilizing Guide Set Screw firmly on presser foot of same position after took off the Stitch Stabilizing Guide. (Ref. Fig. 7)

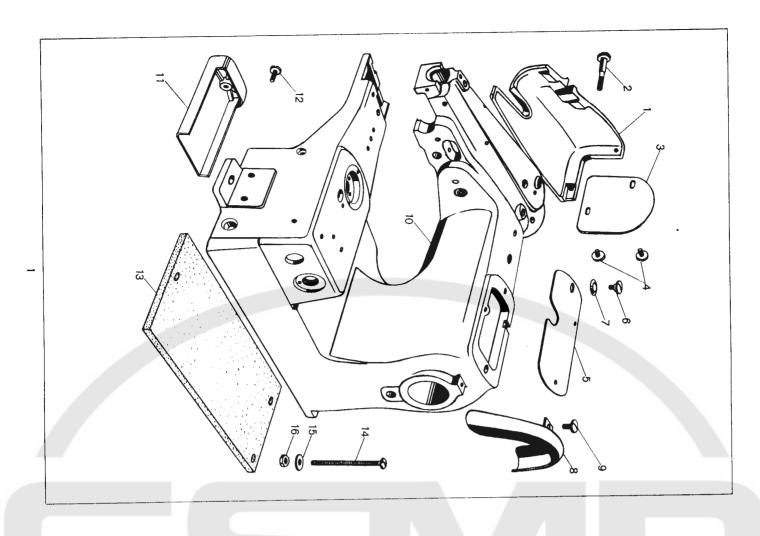

CAUTION: Please take good care not to lose Stitch Stabilizing Guide after took off.
