INTRODUCTION

I. HEAD IDENTIFICATION

a) Identification numbers

1. Every head is identified by:
 - class and sub-class numbers
 - serial number
2. The class and sub-class numbers are engraved on the nameplate on the base of the machine.
3. The head serial number is engraved on a boss on the bottom of the base.

II. TECHNICAL DATA OF CLASS

The heads illustrated in this catalogue are of the single needle overedging type having the following general specifications:

1. Straight needle system RiM 27 - size from 55 to 100
2. Stitch length variable from 6 to 40 stitches per inch
3. Differential ratio up to 3,5 to 1
4. Width of bight from $3/64''$ — $15/64''$
5. Speed from 6,000 to 7,000 r.p.m. according to performance
6. Lubrication by double stage pump
7. Motor: 1/3 HP or 1/2 HP according to sub-class
8. Overall head dimensions 300x240 mm.
9. Weight: about 43 lbs.

III. TECHNICAL DATA BY SUB-CLASS

HEAD No.	TECHNICAL CHARACTERISTICS						SPECIFIC USES	
	No. threads	Width of bight	Diff. pos.	S P E E D		Knives		Sp. attach- ments on req.
				No. of revs. 1" max.	St. per inch			
228-00-01	3	1/8" 15/64"		7000	8-30	si	100 101 106 107	ASSEMBLY SEAMING WITH OR WITHOUT CURLED IN EDGES For medium cut knit fabrics in wool, cotton, etc.
228-00-02	3	5/64" 9/64"		7000	8-30	si	100 101	For perfectly straight hanging seams on warpknit nylon fabrics etc.
228-00-03	3	5/64" 9/64"		7000	8-30	si	100 101 106 107	Same as 228-00-02 but with cutting device adjustable while the machine is in operation
228-00-04	3	1/8" 15/64"		6500	8-20	si	106	For medium and heavy fabrics, with a maximum presserfoot throw of 19/64" - maximum bight 15/64".
228-00-05	3	3/32" 5/32"		7000	8-30	si	100 101 106 107	Same as 228-00-01 but with a slightly narrower bight, for light cotton and woollen cut knit fabrics
228-00-06	3	3/64" 1/16"		6200	20-40	si	100	For closing the toes of nylon stockings
228-00-07	2	1/16" 5/64"		6200	20-40	si	100 106	For closing the toes of helanca and cotton socks
228-00-08	3	3/64" 1/16"		6200	14-40	si	100 106	For very light nylon warpknit fabrics, etc. (15 deniers), with very fine seam
228-00-11	3	5/64" 1/8"		7000	8-30	si	100 106 107	For very light and light woven fabrics (nylon, satin, very light flannel, etc.) with attachment to turn the fabric downwards into the seam.
228-00-12	3	3/32"		7000	8-30	si	100 106 107	For light woven fabrics, with attachment to turn the fabric upwards into the seam.
ASSEMBLY SEAMING WITH OR WITHOUT CURLED IN EDGES, WITH ATTACHMENTS AND/OR INSERTIONS								
228-01-01	3	1/8" 15/64"		7000	8-30	si	107	For medium cut knit fabrics in wool, cotton etc., with attachment for inserting a reinforcement tape into the seam
228-01-02	3	1/8" 15/64"		6500	8-20	si		For medium and heavy fabrics, with a maximum presserfoot throw of 19/64" - maximum bight 15/64". With attachment for inserting a reinforcement tape into the seam.
228-01-03	3	3/32" 5/32"		7000	8-30	si	107	Same as 228-01-01 but with a slightly narrower bight, for light cotton and woollen cut knit fabrics.

III. TECHNICAL DATA BY SUB-CLASS

HEAD No.	TECHNICAL CHARACTERISTICS							SPECIFIC USES
	No. threads	Width of bight	Diff. pos.	S P E E D		Knives	Sp. attach- ments on req.	
				No. of revs. 1" max.	St. per inch			
228-10-01	3/2	5/64" 1/8"		7000	8-30	si	100 106 107	HEMMING For welting knit fabrics in general with invisible seam on right side, with fixed hinged welting folder - with a blind looper to work also with 2 thread.
228-10-02	3/2	5/64" 1/8"		7000	8-30	si	100 106 107	With folder, throat plate, feed dog and presserfoot specially designed for welting along the non-stretchy direction of warpknit, jersey fabrics, etc. with invisible seam on right side, with a blind looper to work also with 2 threads
228-10-03	3/2	5/64" 1/8"		7000	8-30	si	100 106 107	Same as 228-10-02 but with welting folder moveable by means of knee-press, guaranteeing a regular hem even at cross-seams
228-10-05	3/2	5/64" 1/8"		7000	8-30	si	100 106 107	For welting of knit fabrics with invisible seam on right side, with swingout welting folder and with work plate cut out to accept preclosed sleeves, with blind looper to work also with 2 threads
228-10-06	3/2	5/64" 1/8"		7000	8-30	si	100 106 107	For welting of knit fabrics with invisible seam on right side, with blind looper to work also with 2 threads
228-10-07	3/2	5/64" 1/8"		7000	8-30	si	100 106 107	Same as 228-10-01 but with special work plate cut out to accept preclosed sleeves
228-28-01	2	1/8" 15/64"		7000 6500	8-14 6-7	si	100 106 107 120 121 900 901 902	OVEREDGING For serging and/or overedging light and medium woven and knit fabrics where the use of the differential is particularly requested.
228-28-02	3/2	1/8" 15/64"		7000 6500	8-14 6-7	si	100 106 107 120 121 900 901 902	Same as 228-28-01 but with looper to work also with three threads
228-28-07	3	3/32" 9/64"		6000	14-40	si	100 106 107	For serging and/or overedging headsquares, veils, scarves, etc. made from lightweight fabrics such as nylon, silk, japonette, etc. turning the edge of the fabric into the seam.

INSTRUCTIONS : FOR

- INSTALLATION AND TIMING**
- USE**
- MAINTENANCE**

INSTRUCTIONS FOR

INSTALLATION AND
USE
MAINTENANCE

I. INSTALLATION AND SETTING-UP

a) Positioning of head

After motor is mounted on stand, proceed as follows:

1. Push the four shock absorbing rubbers onto the appropriate head mounting plate pins.
2. Place the machine head on the table and center the lower head holes onto the shock absorbing pins.

b) Transmission assembly

1. Fit the transmission belt as in fig. 1.
2. Make sure that back of driving belt rides firmly and squarely on pump pulley.
3. Take-up belt play by adjusting motor clamp.
4. Level the machine head by adjusting the nuts of the bolts which fix the plate to the table.
5. Tighten up the lock nuts on these bolts.

fig. 1

c) Filling sump with lubricating oil

1. Unscrew cap A.
2. Pour in 1 3/4 pts. of VR. 604 oil (Esso Standard Teresso 43) (Bear in mind that the sump holds 2 pts.)
3. Check oil level. The oil visible through indicator glass G, should be between the two red lines.
4. Replace and tighten cap 'A'.
5. Put a few drops of oil on the needle clamp guide rod and upper looper bar before starting machine.
6. Run the machine free of work for about 5 minutes, progressively increasing the speed from 1500 r.p.m. to working speed.

fig. 2

d) Assembly and adjustment of sewing parts

Note: The following operations serve to adjust the timing of the machine.

1. Timing gauges required:
 - S. 1665.00 for all operations except No. 4 (fig. 4)
 - S. 1555.00 for operation No. 4 (fig. 4).
2. Preliminary stripping of:
 - Front cover plate
 - The two thread take-ups of the lower looper holder
 - Plate holding thread tensioners
 - Upper plate with oil spy-glass
 - Side plate protecting needle movement
 - Front feed dog.

3. Positioning the needle (fig. 3).

- With the needle plate properly mounted the needle should be centered for passage through the appropriate hole in the throat plate.
- With the needle at top dead centre the distance between the tip of the needle and the work plate, should be $25/64''$.
- For 228-00-04 and its derivatives, this distance should be $3/8''$.
- If adjustment of the needle clamp is necessary, loosen bolt A (fig. 3) and set distance with gauge S. 1665.00

fig. 3

fig. 4

4. Setting lower looper (fig. 4).

Setting height

- Loosen screw E.
- Firmly screw gauge S.1555.00 into the lower looper shaft.
- Adjust looper height so that its point coincides with the lower notch on the gauge. For 228-00-04 and its derivatives, the looper point should coincide with the upper notch.
- Lightly lock looper with screw E.
- Set height of thread guide bracket 'A' by raising it to top of looper shank and lock by tightening up screw B
- Remove gauge S. 1555.00.

Adjusting angle

- Slightly loosen screw D.
- Rest the gauge S.1665.00 on the milled base as in fig. 5; obtain correct inclination by moving lever C and by rotating the looper (previously having only been held in its seating and not locked).
- The exact position corresponds to that given in the setting tables.
- Firmly tighten screw E (fig. 4).

Positioning the looper with respect to the needle fig.6.

- With the looper hand to the left, check the figure given in the timing table.
- Move lever C up and down the shaft it rotates on. When moving from left to right the looper point should pass 0,2 mm. from the bottom of the needle groove.
- Firmly tighten screw D.

fig. 5

5. Setting upper looper.

Note: To obtain the figure of $5/16'' - 23/64''$ in fig. 9 it is necessary to move lever E up or down, at the same time remembering that by doing this the distances in figs. 7 and 8 will increase or decrease.

- Slightly loosen screw B.
- Slightly loosen screw A.
- Adjust the crossing of the upper and lower loopers by rotating the upper until its point grazes the back of the lower.
- Check the settings shown in fig. 7-8-9 (setting table). The upper looper should graze the needle when passing from left to right.
- Should this condition not exist, slightly loosen screw D and push the whole assembly towards the interior or exterior of the machine without altering the settings previously obtained. Ensure perfect kinematic motion.
- Tighten screw D.
- Re-check the crossing of the two loopers and all the other settings.
- Tighten screws A and B.
- To finish off, make sure that all assemblies move freely.

fig. 6

6. Attaching needle guards (fig. 10).

- Attach front needle guard A.
- With the needle at its lowest point, adjust the front needle guard so that the lower looper point grazes the needle.
- Tighten screw C.
- Attach rear needle guard B and adjust until close to the needle, still in the low position.
- Tighten screw D.

fig. 7

fig. 8

fig. 9

- It must be checked that the needle will not get broken during operation due to any bending causing it to hit the lower looper. To do this, bend the needle towards the interior of the machine and ensure that the looper, when passing from left to right, touches the needle, without breaking it.
- Thread the needle, then bring it right down and gently push it against rear needle guard B.
- The thread should run freely. If it does not it means that the needle is too low and the thread is being caught between the needle and the needle guard.

Note: The looper point should pass through the lower part of the groove on its right hand run, and through the upper part on its left hand run.

- For hard synthetic materials, make the needle bend more against the needle guard.

fig.10

7. Fitting the lower knife (fig. 11).

- Fix bracket P to the knife holder with screw Q.
- Insert knife D into its seat.
- The cutting edge of the knife should not protrude above the surface of the plate.
- Tighten screw A.
- With the needle in the lowest position, slide bracket O towards the needle guard and lock bush L and washer G with screw F.
- Ensure that knife holder C slides freely and then adjust it in relation to the width of stitching required.
- Lightly tighten screw N.
- With the needle in the lowest position move bracket P towards front needle guard and lock with screw Q.
- Having positioned the upper knife in contact with the lower, loosen screw N. Spring M, with pin H, creates correct contact pressure between the knives.
- Rest a finger on screw A and thus exert a very light pressure to lock screw N.
- This pressure must be light in order not to cause strong friction between the two knives and their consequent damage.

Note: The following sub-classes:

228-00-05 228-00-03 228-00-08 and their derivatives do not have brackets O and P.

fig.11

8. Fitting and adjusting feed dogs (figs. 12 and 13).

- Fit the rear feed dogs C and D (fig. 12) and match the feed dog slides.
- Inserting a small screw driver through the threaded holes in the slides, tighten, but not completely, screw F, by means of the groove in its point.
- Fit the front differential feed dog E with screw G but do not lock (fig. 13).
- Loosen screw A.
- Adjust the feed dog inclination by rotating the eccentric B.

fig.12

fig.13

- The feed dog teeth, protruding from the needle plate, should be perfectly parallel with this plate.
- With the feed dogs at the highest point, the distance between their teeth and the plate surface, measured on the front of the feed dog differential, should be $\frac{3}{64}$ ".
- Feed dog C should be lower than the other two feed dogs.
- Lock screws F, G and A.

9. Feed (fig. 14).

Note: The machines illustrated in this manual are supplied with the feed adjusted to suit the work for which the machines are destined.

Should it ever be desired to alter the feed, then procede as follows:

- Substitute eccentric A or eccentric B, or both A and B. For eccentric substitution, according to the length of stitch, consult the appropriate tables. Use extractor drawing No. 280-715.

ECCENTRICITY E	No. stitches per inch	DRAWING No.
2,57 ± 0,03	3,5	280-0451/3,5
2,12 ± 0,03	4	280-0451/4
1,49 ± 0,03	5	280-0451/5
1,06 ± 0,03	6	280-0451/6
0,76 ± 0,03	7	280-0451/7
0,53 ± 0,03	8	280-0451/8
0,36 ± 0,03	9	280-0451/9
0,22 ± 0,03	10	280-0451/10
0 ± 0,03	12	280-0451/12

ECCENTRICITY E	No. stitches per inch	DRAWING No.
0,15 ± 0,02	14	280-0461/14
0,26 ± 0,02	16	280-0461/16
0,35 ± 0,02	18	280-0461/18
0,42 ± 0,01	20	280-0461/20
0,48 ± 0,01	22	280-0461/22
0,53 ± 0,01	24	280-0461/24
0,57 ± 0,008	26	280-0461/26
0,6 ± 0,008	28	280-0461/28
0,63 ± 0,005	30	280-0461/30
0,65 ± 0,005	32	280-0461/32
0,68 ± 0,005	34	280-0461/34
0,7 ± 0,005	36	280-0461/36
0,74 ± 0,005	40	280-0461/40
0,76 ± 0,005	44	280-0461/44
0,8 ± 0,005	50	280-0461/50
0,84 ± 0,005	60	280-0461/60
0,87 ± 0,005	70	280-0461/70
0,88 ± 0,005	74	280-0461/74

fig. 15

fig. 14

10. Fitting upper knife (fig. 15).

- Fit upper knife C into its seat in block A.
- Attach block D and brackets E and G with bolt F.
- Bracket E should be very near the cutting plane of knife C.
- When knife C is at the bottom of its stroke, its cutting edge should be 1/32" below the cutting edge of the lower knife.
- To obtain this, adjust knife C in its inclined seat and block A on the body of the upper knife holder B.
- Lock bolt F and then make sure that when the upper knife reaches the bottom of its stroke it does not touch the front needle guard.

e) Locking and adjusting presserfoot lever (fig. 16).

- Slide the lever shaft L into bush C to which lever D is hinged.
- Insert shaft L and bush C into the appropriate hole in the base.
- Slide lever A and spring E onto shaft L.
- Attach spring clip F to end of shaft L.
- Adjust lever A to eliminate axial play of shaft L.
- Lightly tighten screw B.
- Insert lever D into the guiding fork with the needle at top dead center.
- Connect lever A to the rod joined to the presserfoot raising pedal.
- When the pedal is depressed there should be some free play before lever D is acted upon.

fig.16

- Adjust the screw in the base under lever A until this raises the presserfoot to the required position.
- Ensure that when the upper looper is in movement it does not touch the presserfoot tongue when this is in its highest position. A better guard against the upper looper and the presserfoot tongue hitting, is supplied by adjusting the eccentric washer M which is under lever D and attached to the side cover.
- Lock screw B.

fig.17

f) Adjusting the front cover plate (fig. 17).

- Adjustment is carried out with the plate closed.
- The movable part C should not interfere with the front needle guard or the lower knife holder.
- Slacken-off nut A.
- Adjust screw B to move the plate to left or right.
- Lock nut A.

g) Adjusting needle thread take-up

- When working with very hard materials adjust the needle thread take-up 270-274/2 by moving it forward, that is towards the operator.

ELECTRICAL EQUIPMENT FOR LUBRICATION CONTROL (PRESSURE SWITCH)

h) Dismantling and replacing the pressure switch

- Remove the sump from the base and empty the oil.
- Remove the screw fixing the pressure switch bracket to the sump.
- Remove the two screws holding the cable end.
- Remove the plastic tube from the pressure switch which connects to the rubber union.
- Remove the support bracket and fix it to the new pressure switch.
- Attach the cable end with the screws, slide the plastic tube into the pressure switch and replace in sump with appropriate screw.
- Replace the sump and fill with oil as described on page 11 para. c.

Changing the pressure switch bulb.

- Carry out operations 1 and 2 as explained for the substitution of the pressure switch.
- Remove tube, extract the bulb, which has a bayonet fitting, and replace with a new one.
- Re-attach the tube, position the pressure switch in the sump and attach with the screws.
- Replace sump and fill with oil as explained on pag. 11 para. c.

Electrical connection of pressure switch on Zefir motors.

- Plug the connecting cable into the pick-up socket and plug the other end into the 12 V. light socket on the motor.

Note: if connection has to be made to a motor not equipped with a light socket, but equipped with a 12 V. take-off in the connection box, procede as follows:

- Cut a piece of cable to about 5" length and to one end attach a Mignon socket type 13 and to the other the pins of the 12 V. light voltage.
- Plug the connecting cable into the pick-up socket and plug the other end into the Mignon socket.

Regulating flow of lubricating oil through the main shaft. (fig. 18).

- Remove cap
- Adjust index B with a screw driver. (Movement towards the C engraved on the plate, decreases the oil flow, towards the letter A increases flow.

fig.18

TABLE OF SETTINGS

HEAD SIMBOLS	A	B	C	D	E
228-00-01 = 228-00-04 = 228-00-05 = 228-00-11 = 228-00-12 = 228-01-01 = 228-01-02 = 228-01-03 = 228-10-01 = 228-10-02 = 228-10-03 = 228-10-05 = 228-10-06 = 228-10-07 = 228-28-01 = 228-28-02 =	2,5	1,5	0,8	4,5	3,5
228-00-02 = 228-00-03 = 228-00-06 = 228-00-08 =	2,3	1,5	0,8	—	5
228-00-07 = 228-28-07 =	2,3	1,5	0,8	5	—

II. USE

a) Threading

b) Changing the needle

1. Switch off the motor
2. Depress the pedal which starts the motor to ensure the machine is completely off.
3. Move the needle to top dead center.
4. Press lever B right down (fig. 19).
5. Remove the presserfoot from its working position.
6. Slacken the needle locking screw half a turn with screw driver 1161/2.
7. Remove the needle.
8. Fit new needle.
9. The notch through which the looper passes should face towards the rear needle guard, that is towards the interior of the machine.
10. Using the tweezers supplied ensure that the needle touches the end of the needle holder.
11. Tighten the locking screw being careful not to alter the position of the needle.
12. Do not over-tighten.

fig. 19

c) Positioning and adjusting presserfoot pressure (fig. 19).

1. Check correct positioning of presserfoot
2. The needle should pass between the presserfoot shoe and tongue.
3. To adjust presserfoot slacken off screw F.
4. Center the presserfoot in the correct position and lock F.
5. To increase or decrease the presserfoot pressure, slacken off screw G with spanner 633-742 and adjust knob A.
6. Lock knob A with screw G.

d) Tension adjustment

1. Tighten the tensioners sufficiently to permit a regular stitch formation.
2. Never tighten too much

e) Stitch length adjustment (fig. 14).

For stitch length adjustment see para. a) 9 Feed, pag. 15.

f) Adjustment of seam width.

The seam width can only be varied to a very limited extent after which the needle plate has to be changed. To vary the width within these fine limits proceed as follows:

1. Slacken off screw N in the lower knife holder (fig. 11).
2. Slacken off screw F (fig. 15).
3. Move upper knife support A (fig. 15) to right or left till desired seam width is obtained.
4. Lock screw F (fig. 15).
5. Lower knife holder re-setting should be carried out in accordance with the instructions in para. a) 7.

g) Faults due to improper handling of the machine

n°	FAULT	PROBABLE CAUSE
1	Irregular stitch	– Tensioners badly adjusted – Thread take-ups badly adjusted – Incorrect threading – Yarns not gauged
2	Feed and material slipping	– Insufficient presserfoot pressure – Bad adjustment of feed dog height and inclination – Knives need sharpening – Differential badly adjusted
3	Skip stitching	– Upper or lower looper badly adjusted with respect to needle consequently blunting looper. – Loopers too far apart when crossing – Loopers too close when crossing with consequent blunting. – Front needle guard too far from needle – Needle badly positioned
4	Thread breaking	– Tensions too tight – Thread wound irregularly on the reel.
5	Needle breaking	– Bent needle – Needle badly fitted
6	Puncturing of material	– Blunt needle – Needle size not suitable to throat plate – Needle with unsuitable point
7	Loss of oil	– Screw holding sump to base not tightened enough – Sump plug not screwed up properly – Sump gasket badly fitted.
8	Lack of lubrication	– Oil level too low – Drive belt badly fitted – Upper tube clogged – Lubrication pump filter blocked.

III. MAINTENANCE

a) Every day

Briefly clean all machine parts relating to feed and stitch formation.

b) Every week

1. Remove needle plate and clean the feed dogs, needle guards and loopers.
2. Open front cover plate and carefully clean inside
3. Carefully clean inside the plate covering the needle movement assembly.

c) Every three months

1. Using the spanner supplied, remove the sump drain plug and drain off oil completely.
2. Remove screw 007-L-20 which attaches filter to plug.
3. Extract filter and clean by immersing in petrol.
4. Air blast filter and sump plug.
5. Soak felt with clean oil.
6. Replace sump plug.
7. Refill machine with 1 3/4 pts. of new VR. 604 oil.

fig. 19

IMPORTANT

In operation 1 para. c) do not completely remove the plug to begin with, so that most of the oil runs out through the side holes in the plug (fig. 19).

d) Knife sharpening

1. When sharpening the knives use the RIMOLDI sharpener and special block which guarantees exact sharpening angle. This block is supplied on request.

e) Instructions for removal of cam shaft

- Necessary tools supplied on request only.
- Pliers model S. 0560/00.
- Pliers model S. 0459/00.
- Extractor S. 0416/00

IMPORTANT

It is absolutely essential that the principal components of the crank-shaft/con-rod assembly are replaced in their original positions. To this aim proceed as follows:

- Replace the T flanges with the lubrication hole towards the bottom.
- Leave the screws holding the con-rod caps in their holes.
- Con-rods J and L are distinguishable one from the other by means of a 2 stamped on the top surface of L and three lines on J.
- The con-rod caps are engraved with similar markings and should be matched to the respective con-rod. Both marks should be on the same side.
- The position of con-rod N is given by the drawing number which should be on the pulley side.
- Carefully follow the cup spring assembly order.

SEQUENCE OF OPERATIONS (fig. 20).

1. Open the side cover.
2. Remove screw D.
3. Using extractor 280-715 extract the eccentrics A and B.
4. Remove con rod caps N, O, J, L.
5. Remove screw Z.
6. Remove pulley cover Y.
7. Slacken off hexagonal screw X.
8. Remove washer W.
9. Extract pulley V.
10. Remove flange T.
11. Remove spacer U.
12. Remove springs S.
13. Extract spring ring P using pliers S. 0459/00 slightly turning the shaft to the right.
14. Extract the shaft.

fig. 20

SPARE PARTS CATALOGUE

I. HOW TO USE THIS CATALOGUE

a) Introduction

1. This spare parts catalog is made up of a series of tables illustrating the various parts or assemblies which make up the basic head and its sub-classes.
2. In order to make the use of this catalogue easier, the table index shows the position of each assembly inside the head.
3. The conversion assemblies of the basic head and its sub-classes are illustrated in single tables.
4. In the tables, the numbers which identify the sub-classes are printed at top right of page in black.
5. On each table the various components of the assembly illustrated, are cross-referenced by a number. The assemblies, whose components cannot be supplied separately, are cross-referenced by a capital letter. Parts and equipment not normally with the machines but which can be supplied on request, are given at the bottom of each table and are illustrated complete with all their particulars at the end of the book.
6. The catalogue has a general numerical index giving the cross-reference numbers of all component parts of the machine and listing the table on which the parts are illustrated.

II. HOW TO ORDER SPARE PARTS

a) All parts

To ensure immediate dispatch of required spare parts, the following instructions should be carefully followed:

1. Quote the serial number of the head.
2. Quote the drawing number of the part required.
3. Give the full name of the part required.
4. The quantity.

IMPORTANT

The RIMOLDI Company likes to analyse any cases of breakage, wear or irregularities arising in parts manufactured by them. For this reason they kindly ask you to return such pieces along with the order for spare parts.

b) Needles only

1. Only straight system RIM 27 needles should be used on the machines illustrated in this manual.
2. The needle system and size are marked on the needle shank.
3. The size indicates the average diameter expressed in hundredths of a millimeter calculated on the blade of the needle.
4. The system and size are also shown on the packets containing RIMOLDI needles.
5. When ordering always give the system and size of the needle required (e.g. n. 100 needles size 90 system RIM 27).
6. In case of doubt send a sample needle or an empty packet of the type required.
7. For stitching elastic or elasticised materials there are ball point needles classified SKU.

I. HOW TO USE THIS CATALOGUE

a) Introduction

1. This spare parts catalogue is made up of a series of tables illustrating the various part or assemblies which make up the basic head and its sub-clusters.
2. In order to make the use of this catalogue easier, the table index shows the position of each assembly inside the head.
3. The conversion assemblies of the basic head and its sub-clusters are illustrated in single tables.
4. In the tables, the numbers which identify the sub-clusters are printed at top right of each in black.
5. On each table the various components of the assembly illustrated are cross-referenced by a number. The numbers, whose components cannot be supplied separately, are cross-referenced by a capital letter. Parts and equipment not normally with the machine, but which are supplied on request, are given at the bottom of each table and are illustrated separately with all their particulars at the end of the book.
6. The catalogue has a general numerical index giving the cross-reference numbers of all component parts of the machine and listing the table on which the parts are illustrated.

II. HOW TO ORDER SPARE PARTS

a) All parts

To ensure immediate dispatch of required spare parts, the following instructions should be carefully followed:

1. Quote the serial number of the head.
2. Quote the drawing number of the part required.
3. Give the full name of the part required.
4. The quantity.

IMPORTANT

The RIMOLDI Company likes to analyse any case of breakage, wear or irregularities arising in parts manufactured by them. For this reason they kindly ask you to return such pieces along with the order for spare parts.

b) Needles only

1. Only straight system RIM 37 needles should be used on the machines illustrated in this manual.
2. The needle system and size are marked on the needle shank.
3. The size indicates the average diameter expressed in hundredths of a millimeter calculated on the blade of the needle.
4. The system and size are also shown on the packets containing RIMOLDI needles.
5. When ordering always give the system and size of the needle required (e.g. n. 100 needle size 90 system RIM 37).
6. In case of doubt send a sample needle or an empty packet of the type required.
7. For stitching elastic or elasticated materials there are ball point needles classified SKU.

ATTACHMENT
(W1) 100

WARNING: the apparatus is designed for 220 V. For different voltages run through an autotransformer type SUT. 1745.00 with relative connectors type PM. T 11-127.
