

WOLF[®] ABLE CUT-OFF MACHINE

PARTS AND SERVICE MANUAL

Published April 2008

- **Standard Model**
- **Deluxe Model**
- **Motors - ST2000 & ST5000**

WARNING

This is a hazardous type of machinery and should be used with care. Always disconnect electrical connector before performing repairs, adjustments or maintenance. Be sure machine is properly grounded. Never place hands or any part of your person in the path of the machine when it's in service. Keep the finger guard as low as possible during operation and completely down when not in use. Keep main switch off when machine is not in use. For personal safety the operator should remove all loose fitting jewelry, shouldn't wear loose or baggy fitting clothing and persons with long hair should cover or pull it back. Never leave the machine unattended with its motor running.

[illegible]

Part No.	Description
1676400	Pin (Quan. 4)
1676500	Blade Housing
1676520	Metal Guard (Not shown)
1676600	Screw (Quan. 4)
1676700	Dented Washer (Quan. 4)
1676800	Lifting Switch
1676900	Cylindrical Head Screw (Quan. 2)
1677000	Dented Washewr (Quan. 2)
1677100	Box
1677200	Countersunk Screw
1677300	Angle for Box
1677450	Contactor/Terminal Box S.A.
1677500	Cylindrical Head Screw (Quan. 2)
1677600	Terminal Block
1677700	Wire Protector
1677800	Hexagonal Nut, Flat
1677900	Switch
1678000	ON/OFF Switch
1678100	Sliding Angel
1678200	Counter Weight
1678300	Finger Guard
1678500	Screw (Quan. 2)

OPERATING INSTRUCTIONS

1. Pull cloth across Guide Rail to desired end rail setting (as shown on front cover).
2. Secure cloth under the end rail.
3. Turn on main switch and pull cutter across material. **NOTE:** When main switch is on, machine will automatically turn motor on when lifting switch slides off cam on far side, and turn off motor when cutter reaches cam on the near side.
4. Push cutter back to far side. Pull up Guide Rail and secure cut end beneath it.
5. Repeat operations.

LUBRICATION

Add 1 or 2 drops of oil daily, depending on use, to oil hole on blade housing. Occasionally clean and lightly oil the spring steel strip in the guide rail.

SHARPENING

To sharpen, press grinding stone button lightly and briefly down against the blade while machine is running. Pressure must be light to avoid putting a burr on the blade. When blade becomes less than 3-7/8" or 98 MM in diameter, it must be replaced. Also keep grinding wheel clean by spraying with Wolf's Keep-M-Kleen emery wheel cleaner (Part #2100600).

CHANGING BLADES

1. Turn Main Switch off, and disconnect the electrical connector. The cutting machine may then be removed from the Guide Rail.
2. Remove the Sharpener and the Finger Guard.
3. Remove Tension Nut, Tension Spring and Blade Holder.
4. Remove old Blade. **NOTE:** Be careful when handling blades. New blades are factory sharpened and extremely sharp. Old blades may be dull for cutting material but both new and old blades can inflict personal injury.
5. Insert new blade with the writing side out and make sure blade is properly seated on the driving pins before reassembling.
6. Reverse steps 1, 2, and 3.

PART ORDERING

Order ALL PARTS by Part No. shown and BE SURE to give the motor # and voltage of your cut-off machine.

The Motor number tells us the size of the part needed in your installation.

ST-2000 110 Volts Single Phase
ST-2000 220 Volts Single Phase
ST-5000 220 Volts Three Phase

EXAMPLE: Give Serial No. of machine _____ Give name & no. of part,
Motor Housing 1676000 Supply Model No. ST-5000 Give voltage, 220V.
