***** ILLUSTRATED SPARE PARTS LIST *****

1. Specifications

Model	: VF2502-064, VF2502P-064
Description	: High Speed 3 Needle Double Chainstitch Machine (P : with Puller)
Dimensions	: 500(L) × 250(W) × 430(H)mm
Weight	: 41kg
Stitch type	: ISO(401·401·401)
Application	: lap seam for jeans and similar fabrics
Sewing speed	: Max. 5,000s.p.m.
Stitch length	: 1.4~3.6mm : stitch number 7~18 stitches/inch : 8~21 stitches/30mm
Needle to be used	: Schmetz or Organ UY128GAS
Needle distance	: 6.4mm(3.2, 3.2mm)
Needle stroke	: 31mm
Presser Foot lift	: 7.0mm
Feed regulation	: by Pushbutton
Differential ratio	: Max. normal differential 1:2 Max. reverse differential 1:0.7
Differential feed regulation	: Adjustable during operation by moving Lever up and down from outside
Lubrication	: Automatic lubrication by Oil Pump
Lubrication oil	: YAMATO SF OIL (Teresso 46 is also available.)
Capacity of oil reservoir	: 1,100cc
Installation	: Semi-submerged or full-submerged type

2. Installation(Full-submerged type)

☆ Installation of Supporting Board

Install Machine correctly as shown in the figure.
Set Screws to Supporting Board. Fix Supporting Board on Machine Table. Place Rubber Cushions on Screws and mount the Machine on them securely.

☆ Openable Table

Operator

☆ Supporting Board

4. Threading

5. Adjustment

5-1 Looper thread tension

The figure shows Looper Thread Take-up.

Align the uppermost holes of Thread Take-up Eyelet (E) and (F) with the mark(·) of Cast-off Plate(D), which is standard.

To increase the feed amount of looper thread, loosen Screws(G) and (H) before sliding Eyelet(E) and (F) to (X)-direction.

To decrease it, loosen the Screws before sliding the Eyelets to (Y)-direction.

Take care that too much feed amount of looper thread may cause skip stitch.

5-2 Position of Looper Thread Take-up

The figure shows Looper Thread Take-up seen from Needle Bar side. When Looper is at the leftmost position(the uppermost position of Needle Bar), loosen Screws(K) before making the flat face of Looper Thread Take-up(I) level with Supporting Plate (J).

5-3 Amount of Looper movement to the right

We recommend the central Needle for the adjustment. When Needle is at the lowest position of its travel and Looper reaches the rightmost position, the distance between the tip of Looper and the center of Needle is 3.0~3.5mm respectively. For its adjustment, loosen Screw(L) of Looper Holder.

5-4 Height of Needle Bar

We recommend the central Needle for the adjustment.

At both moving to the left and to the right of Looper, when the tip of Looper comes to the center of Needle, the tip must pass 1.5~2.0mm above the upper end of needle eye. For its adjustment, insert Screwdriver from the hole(A) of Head Cover. Loosen Screw(B) of Needle Bar Bracket before moving Needle Bar up and down.

5-5 Front and rear position of Needle and Looper

The standard clearance between the tip of Loopers and Needles is 0~0.05mm respectively.

We recommend the central Needle(F) and Looper(C) for the first adjustment. Insert Looper(C) (with a flat spot) to the bottom before tightening Screw of Looper. For its adjustment, loosen Screw(L) of Looper Holder before moving Looper Holder in front and in rear. Next, for making the clearance of 0~0.05mm, loosen Screws of Looper(D) and (E) before turning Looper.

5-6 Needle and Needle Guard

We recommend the central Needle(F) and its Looper for the first adjustment.

When the Looper comes to the right end of Needle(F), the height of (g) portion of Needle Guard(G) is about 1.0mm above the tip of the Needle.

Fix Needle Guard(G) to push Needle slightly.

The clearance between Needle and Needle Guard is 0mm or up to 0.2mm.

When Needle(F) is adjusted, the right and left Needles can be also adjusted.

However, check their condition.

5-7 Adjustment of Upper Feed Roller(VF2502P)

When lowering Upper Feed Roller(H), the clearance between (H) and Roller Support(J) should be the same thickness as a fabric. To adjust it, loosen Nut(K) before turning Adjusting Screw(L).

When Presser Foot touches the surface of Stitch Plate, the clearance between the lower side of the slot of Lifter Connecting Plate and Screw(M) is 0.5mm. To adjust it, loosen Screw(N) of Upper Feed Roller Lifter(Right).
